Subject: Buckingham - Pigging Operations

Pat

Based on your conversation today with T.R. Andrade (Dominion) regarding our recent response to your information request on the Buckingham Compressor Station, I wanted to provide a suggested limit relative to pigging events. ACP suggests limiting the number of pigging events to not exceed more than 15 for each launcher and receiver at the Buckingham Compressor Station in any given 12 month period. This allows ACP operational flexibility to effectively conduct an inspection of the pipeline to ensure the safe reliability of the pipeline operations.

Please let us know if you have any questions or need any other additional information.
